We always follow the philosophy of 'Quality materials - quality products.'

In order to keep possible production defects and risks at minimum, quality control at maximum level, we do all the production process from casting to mounting by ourselves checking quality in each stage. In a laboratory of quality control our engineers conduct test on functionality, performance capacity and stability (as well as tests for impermeability and strength) on special measuring equipments.

In production line we use Japenese CNC machines and other universal machines which allow us to manufacture high quality products for commercial vehicles such as VOLVO, SCANIA, MERCEDES BENZ, IVECO, MAN, DAF, RENAULT with guarantee according to World Standarts.

Our engineers and technical group continuously work on researches and developments, pay a great attention to the motto: 'Do it right in a first time and every time' in each step of the production process.
